

30 **IN THE CLAIMS:**

31 This listing of claims will replace all prior versions, and
32 listings, of the claims:

33

1-25. (Canceled)

26. (currently amended) A method of fabricating ordered
patterns of nanoscale objects on a substrate surface comprising:

 applying a resist layer to a substrate surface;

 stamping an imprint mold having nanoscale teeth onto the
resist layer; and

 releasing the imprint mold to expose a template having a
template surface formed into the imprint resist layer and having
nanoscale openings formed therein to receive nanoscale objects;
and

 depositing a plurality of discrete nanoscale objects onto
the template such that the nanoscale objects are received within
said nanoscale openings, said nanoscale objects are selected
from a the group consisting of nanoparticles, nanowires,
nanorods, nanotubes, proteins, and DNA.

27. (previously presented) A method according to Claim 26,
further comprising selectively removing residual layer material
from the substrate surface to expose portions of the substrate
surface, and wherein at least some nanoscale objects are in
contact with the exposed substrate surface.

28-30. (Canceled)

31. (previously presented) A method according to Claim 26,
further comprising:

removing the nanoscale objects that remain outside of the
openings with a chemical wash.

32. (original) A method according to Claim 26, wherein the
nanoscale openings are ordered in a pattern with respect to at
least one of the group consisting of size, shape, orientation,
pattern, and position.

33-37. (Canceled)

38. (previously presented) A method according to Claim 26, further comprising attaching DNA oligomers to the nanoscale objects, and wherein the nanoscale objects are proteins.

39-40. (Canceled)

41. (Original) A method according to Claim 26, wherein the stamping is performed by a step and flash lithographic method.

42-72. (Canceled).

73. (previously presented) A method according to Claim 26, further comprising forming a first set of wires below the template, and forming a second set of wires above the template, and wherein the nanoscale objects are conductive and provide electrical connection between the first and second sets of wires.

74. (new) A method according to Claim 26, wherein said depositing a plurality of discrete nanoscale objects is conducted in the absence of depositing a nanoscale-object-attracting-coating in said nanoscale openings.

75. (new) A method of forming a nanoscale object on a substrate surface comprising:

applying a resist layer to a substrate surface;
imprinting a nanoscale opening into the resist layer with a mold;

removing the mold to expose said nanoscale opening in said resist layer, said nanoscale opening sized to receive a nanoscale object therein; and

depositing a nanoscale object onto the resist such that the nanoscale object is received within said nanoscale opening.

76. (new) The method according to Claim 75 wherein said nanoscale object is selected from the group consisting of nanoparticle, nanowires, nanorods, nanotubes, proteins, and DNA.

77. (new) The method according to Claim 75 wherein a single, discrete nanoscale object is received within a single, discrete nanoscale opening.

78. (new) The method according to Claim 75 wherein a plurality of nanoscale objects are received within a plurality of nanoscale openings.

79. (new) The method according to Claim 75 wherein said nanoscale object received within said nanoscale opening is in direct contact with said substrate surface.

80. (new) The method of Claim 75 further comprising attaching a DNA oligomer to the nanoscale object.

81. (new) The method according to Claim 75 wherein the nanoscale object is a protein.
